Strong background in Import Sets, Update Set Migrations, Deployments, and **Custom Application Development**. Experienced in Hardware Asset Management.

EXPERIENCE

Senior ServiceNow Developer - HRSD Specialization

PwC US, Bangalore | September 2024 – August 2025

- Led the HRSD implementation for a US enterprise, supporting the migration of HR processes to ServiceNow and ensuring smooth transition for end users and support teams.
- Designed, developed, and supported 11 integrations including email based, REST API, file based, and ServiceNow to ServiceNow integrations to enable reliable data exchange and operational continuity.
- Built and supported chatbots and virtual assistants to handle employee queries and HR cases, reducing manual support effort and improving response efficiency by 35 percent.
- Configured and supported HR Case Management by setting up case tables, business rules, client scripts, lifecycle events, HR services, criteria, and conditions in line with business and support requirements.
- Customized and supported the Service Portal with branding, navigation improvements, and dynamic content to enhance the employee support experience.
- Developed and supported Service Catalog items to automate employee requests and approval workflows, reducing dependency on manual HR and IT support.
- Ensured platform stability and best practices by providing production support, mentoring junior developers, and reviewing code for Scripted APIs, Flow Designer automations, and business rules.

ServiceNow Developer – Asset Management Specialization

PwC US, Bangalore | December 2022 – September 2024

- Developed and enhanced Hardware Asset Management workflows in ServiceNow for internal laptop provisioning processes.
- Automated processes for issuing laptops to new hires, replacements, and asset returns on termination.
- Designed and implemented ServiceNow workflows, scheduled jobs, and notifications to streamline asset issuance.
- Integrated ServiceNow with third-party laptop provisioning and delivery vendor APIs for request fulfillment. Refactored existing integrations and code to support transition from one shipping vendor to another.
- Improved process efficiency by optimizing ServiceNow flows and ensuring seamless vendor communication. Contributed to Software and Hardware Asset Management modules by aligning workflows with IT asset lifecycle management practices.

ServiceNow Developer – CyberFrontDoor

Infosys Pvt. Ltd., Bangalore | April 2020 - December 2022

- CyberFrontDoor Implementation to an Australian client. It was a ServiceNow project that had fully customized scoped applications, modules, tables, and portal widgets and ITSM Modules.
- Creation of custom portal widgets for the end users, allowing them to engage with the backend teams.
- Aided in the creation of services portal pages as well as in optimizing the portal for faster loading times when using multiple widgets.
- Working with Business Rules, Client Scripts, Access Controls (ACLs), UI Policies, UI Actions, UI
- Policy Actions, Scheduled Jobs, Script Includes, Email & Notifications, Record Producers in scoped applications on ServiceNow Instance.
- Prepared dashboards, reports, and report layers (datasets) in accordance with business requirements.
- Hands-on experience in creating custom tables and forms, configuring form-views and list views.
- Implemented ACLs based on business requirements to restrict User access to modules and application menus.
- Migration of development environments to test environments using update sets.
- Actively participate in daily Scrum meetings and regular sprint planning, review, and retrospective meetings
- Provided guidance to junior developers in terms of best practices and knowledge transfer sessions.

ServiceNow Developer – CyberFrontDoor IT Support Engineer

Infosys Pvt. Ltd., Bangalore | November 2019 - April 2020

- DCM was a device care management project for an Australian client, built on ServiceNow using CSM and ITSM modules to support end user device issues and service requests.
- Worked on the CSM module by configuring tables, fields, system properties, UI policies, business rules, script includes, client scripts, and service portal components to support IT support workflows.
- Provided hands on support in developing and maintaining custom service portal widgets using AngularJS, HTML5, and JavaScript to improve the end user support experience.
- Developed new functionalities and enhanced existing features based on business and IT support requirements.
- Implemented fix scripts to correct data issues and support incident and service request accuracy.
- Assisted with incident resolution, bug fixes, testing, deployments, and production support across different phases of the project.
- Actively participated in daily Scrum calls and sprint planning, collaborating closely with developers, testers, and support teams to ensure timely issue resolution.

EDUCATION

- Bachelor's degree in technology - Saintgits College of Engineering
 - July 2015 – July 2019 | Computer Science and Engineering
 - CGPA: 7.74
